

Scheduled Delivery Guide for District Administrators

Version 1.0 August 15, 2025

Cambium Assessment, Inc. (CAI) provides Scheduled Delivery that allows specified users of the Florida Reporting System (FRS) to securely send their assessment results to their own Secure File Transfer Protocol (SFTP) server or Amazon S3 bucket on a regular basis, either daily or weekly.

Currently, FRS allows educators to manually download student data files containing student assessment results; Scheduled Delivery streamlines this process by allowing districts to automatically receive this information.

District administrators with access to the CRSAPI_DISTADMIN role can conveniently set up Scheduled Delivery from the *Features & Tools* panel available in FRS. This guide provides instructions for setting up new Scheduled Delivery connections and managing existing connections.

How District Administrators Create Scheduled Delivery Connections

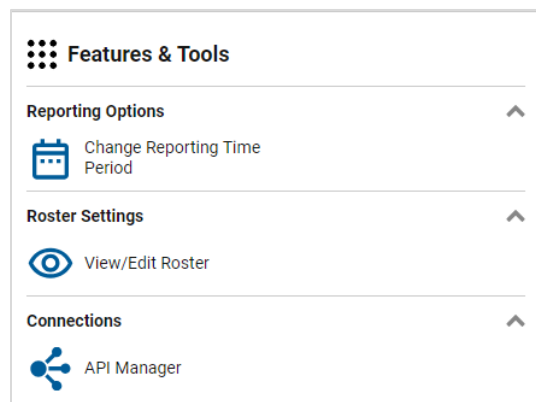

For a district to automatically receive student performance data from FRS, a district administrator with access to the CRSAPI_DISTADMIN role needs to create a Scheduled Delivery connection.

To access the Connection Manager feature in FRS, district assessment coordinators (DAC) must sign in to their FRS account using the provided CRSAPI_DISTADMIN role. If the DAC for your district does not have the CRSAPI_DISTADMIN role or is not able to access the Connection Manager feature in FRS, they should contact the CAI Help Desk and ask that they be given access.

Once you create a Scheduled Delivery connection, the specified assessment results will be sent until the chosen expiration date for that connection. To create a Scheduled Delivery connection, take the following seven steps:

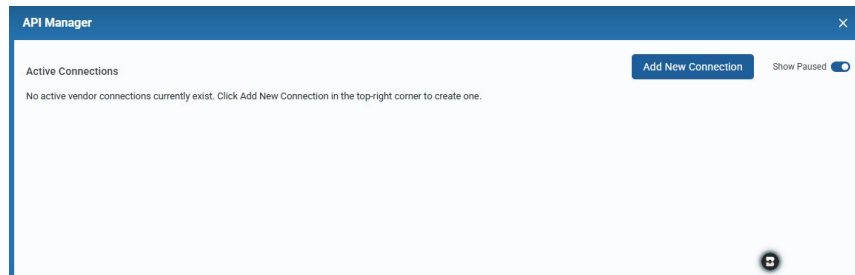

1. To create a Scheduled Delivery connection, log in to FRS and click **API Manager** in the *Connections* section of the *Features & Tools* panel (refer to Figure 1).
 - If this panel is not already expanded, you can click **Features & Tools** in the top-right corner of a report to open it.

Figure 1. Features & Tools Panel

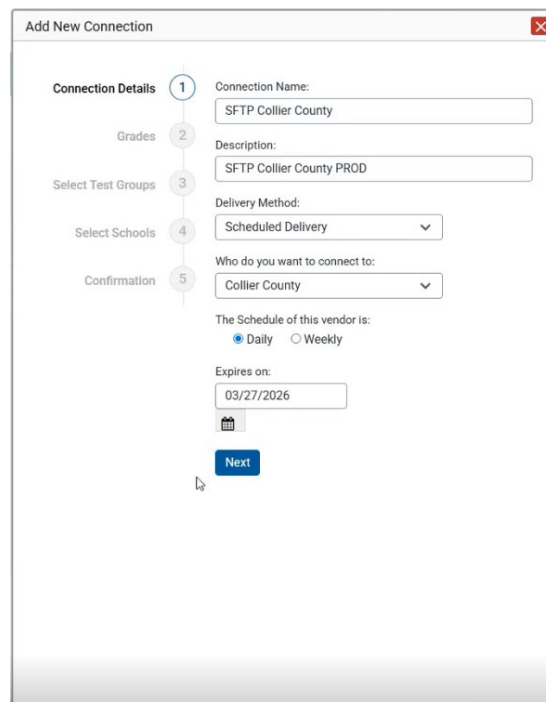

- The **API Manager** window opens (refer to Figure 2), displaying a table with all the active connections. To create a new Scheduled Delivery connection, click **Add New Connection** in the top-right corner.

Figure 2. API Manager Window—Active Connections View

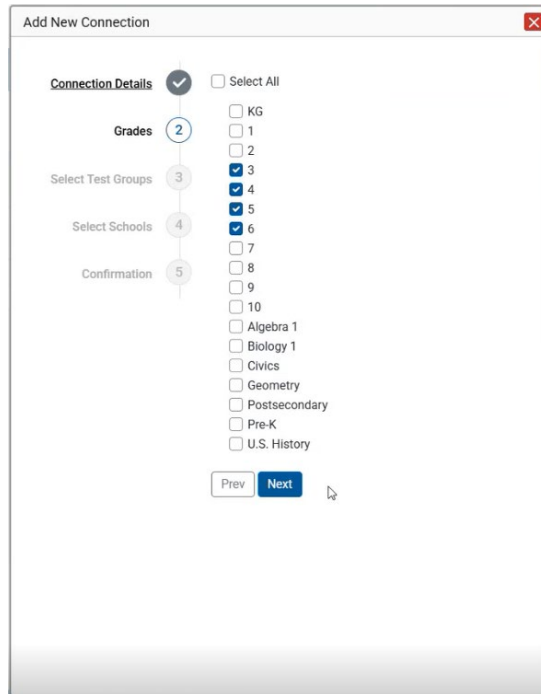

- In the **Add New Connection** window (refer to Figure 3), enter a name and description for the new Scheduled Delivery connection, select Scheduled Delivery as the delivery method, select the name of your district-specific connection from the drop-down list labeled “Who do you want to connect to,” and select Daily or Weekly for the frequency. In the *Expires on* field, enter the date on which the connection should stop sending data for the year. Then, click **Next**.

How to Manage Active Scheduled Delivery Connections

After a Scheduled Delivery connection is created, it appears in the *Active Connections* table on the **API Manager** page. District and School Administrators can use this table to view the status and details of a Scheduled Delivery connection, edit the parameters of a connection, pause an active connection, or reset the connection.

For each Scheduled Delivery connection, the *Active Connections* table displays the name of the connection, information about its latest updates, the connection's deactivation date, the status of the connection, the total number of student data file requests the vendor has made (along with the number of requests made in the last 15 minutes), and the date on which a student data file was last requested.

  Experiencing Issue

Using the *Active Connections* table, you can do any of the following tasks:

- To edit an active connection, click **Edit** in the *Actions* column. In the window that pops up, you can modify which data the Scheduled Delivery will send and the date on which the connection expires.
- If you wish to temporarily stop Scheduled Delivery, you can click **Pause** in the *Actions* column.
 - To reactivate a paused Scheduled Delivery, click **Reactivate** in the *Actions* column.
 - If you wish to hide all paused connections from the *Active Connections* table, you can turn off the **Show Paused** switch at the top-right corner of the table.
- To monitor the status of an active connection, check the icon in the *Status* column for that connection. The following status icons may display:
 -  **Connected:** Indicates that the Scheduled Delivery connection is currently enabled.
 -  **Paused:** Indicates that the Scheduled Delivery connection is paused. While a connection is paused, no data will be sent. Paused connections can be reactivated from the *Actions* column.
 -  **Experiencing Issue:** Indicates that the Scheduled Delivery is not working due to an unexpected issue. If you see this, please contact CAI Florida Help Desk.
